Manage Construction Projects from Start to Finish with ProEst

Increase productivity and collaboration between field and office teams from the bidding stage to final reconciliation.

In an industry where time is money and the competition is fierce, it pays to have a clear view of every construction project detail—from the first take-off to the final close-out.

The Acumatica Construction Edition and ProEst integration allow organizations to manage their projects and workflows seamlessly from start to finish. Accelerate estimate production, enhance accounting visibility, and provide real-time data that boosts the bottom line.
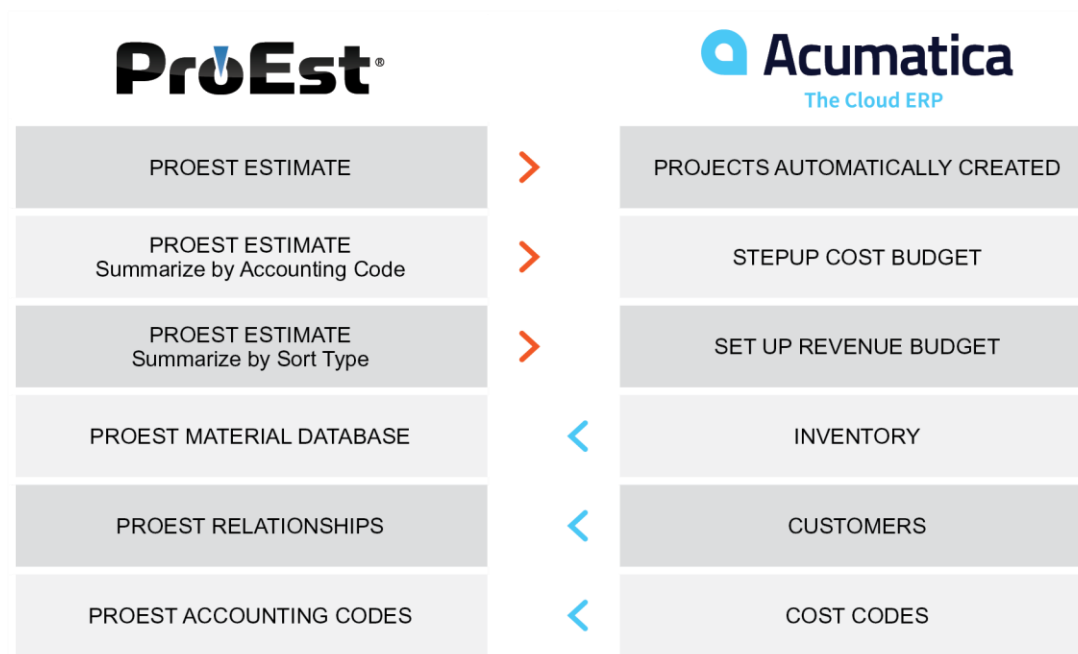

The nature of the construction industry dictates that there are separate teams in office and field locations. Traditional ERP and Construction Management systems lead to siloed data, miscommunications, and unaligned processes in this business environment. A cloud-based, end-to-end estimating and construction accounting solution can give companies the project visibility and control needed to take their business to the next level.

The Acumatica Construction Edition and ProEst integration provide office and job site teams the tools to communicate more effectively, collaborate in real-time, and share project data anytime, anywhere, and from any device.

ProEst has helped more than 8,000 construction companies improve their estimating processes. Its innovative, easy-to-use cloud platform combines CRM, detailed cost estimating, digital takeoffs, and industry-specific databases to give you all the functionality you need in a single solution.

"With the implementation of Acumatica, our focus has been able to shift to tracking KPIs and things that are more meaningful to the business instead of more what I call busy work."

–Cassandra Moore, Director of Finance and Accounting, Alpha Insulation & Waterproofing
